

PRAVEEN M

Software Engineer — Full Stack Development | Backend Systems | Blockchain (Hyperledger Fabric)

Chennai, Tamil Nadu, India | 9344839914 | praveenlee1707@gmail.com | linkedin.com/in/praveenm-885017168 | github.com/PraveenRaizo

Professional Summary

Software Engineer with 4+ years of experience building full-stack and backend systems using Node.js (NestJS), Next.js, MySQL, and MongoDB. Proven expertise designing and deploying Hyperledger Fabric blockchain networks on Kubernetes, authoring 100+ production APIs, and leading development of AI-assisted document management platforms. Skilled in Microservices Architecture, Scalable Architecture design, REST API design, real-time systems (Socket.IO), Elasticsearch, and mentoring junior engineers.

Technical Skills

- Languages & Frameworks: Node.js, NestJS, Next.js, React, JavaScript, TypeScript, Go (learning), Python
- Blockchain: Hyperledger Fabric, Chaincode Development, Kubernetes-based Blockchain Network Setup
- Databases: MySQL, MongoDB, Elasticsearch, Microsoft SQL Server (SSMS)
- Infrastructure & DevOps: Kubernetes, Docker, Docker Compose, Continuous Integration / Continuous Deployment (CI/CD) Concepts with Jenkins, NFS (shared storage between pods)
- Cloud Platforms: AWS (EC2), DigitalOcean, Azure (AKS)
- APIs & Integration: REST API Design, Microservices Architecture, Swagger/OpenAPI Documentation, Socket.IO (real-time notifications), Cron Jobs
- Tools & Practices: Jest (automated testing), Test-Driven Development (for critical modules), Version Control (Git), PrimeReact, Custom Query Builders, Agile Development, AI-assisted Development

Professional Experience

Software Engineer

BU Soft Tech

Jan 2026 – Present

Chennai, Tamil Nadu, India

- Led backend schema design for a configurable, general-purpose Document Management System (DMS).
- Mentored 2 junior engineers on API logic implementation, resolved merge conflicts, and finalized releases.
- Built 4 configurable document upload/destination integrations (Google Drive, OneDrive, Outlook, LINE), supporting flexible folder structures and metadata per client.
- Delivered 23 GET, 20 POST, 7 PATCH, and 4 DELETE APIs to date on an ongoing project, using AI-assisted development agents to speed up delivery cycles.
- Identified a performance bottleneck in dashboard statistics APIs and proposed a Redis caching layer to reduce response latency; deferred due to infrastructure budget constraints.
- Maintained 100% test-pass discipline pre-commit using Jest, applying Test-Driven Development for critical modules; kept API docs in sync via Swagger.
- Built and maintained Docker images and Docker Compose configurations consumed by the DevOps team's Jenkins-based CI/CD pipelines for deployment; published images to Docker Hub for versioning and team reuse.

Software Engineer

Agira Technologies

May 2025 – Jan 2026

Chennai, Tamil Nadu, India

- Engineered the Hyperledger Fabric blockchain network on Kubernetes for a Digital Credentialing platform, independently designing and implementing the full network setup, later audited and approved by Quill Audits.
- Developed 110+ blockchain-integration APIs in NestJS, containerized as Kubernetes pods, bridging chaincode and application backend with sub-1-second response times for high-volume blockchain data retrieval.
- Implemented NFS-based shared storage between pods to support reliable inter-pod data access within the blockchain network.

- Provisioned containerized application deployments on AWS EC2 and DigitalOcean using Docker and Docker Compose, maintaining images on Docker Hub for versioning.
- Set up a self-managed Kubernetes cluster on DigitalOcean and authored deployment manifests (pods, services, PV/PVC) for an organization-managed Azure AKS cluster.
- Built core backend and frontend logic for an AI-powered Intelligent Document Management System for an insurance client; authored complete logic for 150+ of 348 total APIs and enhanced/debugged the remainder.
- Led design and development of nested folder/tree-view navigation in Next.js using PrimeReact.
- Built real-time features with Socket.IO for live notifications and automatic session logout across frontend and backend.
- Designed a custom query-builder engine (adapted from react-query-builder) powering automated workflows that auto-create and assign department tasks on document upload.
- Integrated Elasticsearch indexing APIs (add/update/delete) for fast document search and retrieval; connected to MongoDB (owned by the AI team) for AI-classification data alongside MySQL as the primary backend database.
- Exposed NFS-stored documents through a dedicated backend static file server, cutting document retrieval time from several seconds to under one second compared to routing reads through the application database layer.
- Set up scheduled cron jobs for reminder notifications to support workflow and task SLAs.

Junior Software Engineer

Sep 2022 – May 2025

- Built foundational backend and full-stack development skills, contributing to early-stage feature development and bug fixes across Node.js and React-based projects.

Career Break

Jan 2021 – Sep 2022

- Prepared for competitive government examinations.

Customer Service Associate

Jun 2020 – Jan 2021

- Delivered customer support operations, building foundational communication and problem-solving skills prior to transitioning into software engineering.

Key Projects

- Digital Credentialing Platform — Hyperledger Fabric network on Kubernetes (Quill Audits-approved); 110+ blockchain APIs in NestJS with sub-1s latency; NFS-based pod storage sharing.
- Intelligent Document Management System (Insurance) — AI-based document classification platform; 150+ APIs authored end-to-end; Next.js frontend with tree/folder views, Socket.IO notifications, custom workflow query builder, Elasticsearch search.
- General-Purpose Document Management System — Multi-tenant DMS with configurable folder structures and metadata; React frontend with PDF viewer; integrations with Google Drive, OneDrive, Outlook, LINE; led backend schema design and mentored 2 junior developers; Jest + Swagger-driven quality process.

Certifications

- Python Essentials 1 — Cisco | credly.com/badges/9951fa8e-ebef-498e-abc2-d46a161d7eb5
- Microsoft SQL Certification Training — Intellipaat | lms.intellipaat.com (verification ID: cus-9307701)
- Introduction to Sub Agents | verify.skilljar.com/c/2u9ko9b64b2q
- Introduction to MCP | verify.skilljar.com/c/3tqrm2ozx43j
- Claude Code 101 | verify.skilljar.com/c/jsnpgdfrjio9
- JavaScript Test — TestDome | testdome.com/certificates/da6f2c4beb894e46a7d787db7e235420

Professional Objective

Seeking a backend/full-stack engineering role to deepen expertise in distributed systems, blockchain infrastructure, and scalable platform architecture, while continuing to mentor junior engineers.

Education
